

In Pursuit (Pursuit-Roadmap)

Transforming Curriculum Uncertainty into Clear Career Trajectories.

Overview

In Pursuit is a dynamic career-pathing and trajectory application designed specifically for builders navigating technical bootcamps and intensive developer programs.

In every fast-paced learning environment, a large percentage of builders experience the "first-two-weeks fog"—getting flooded with syntax, frameworks, and logic, yet asking: *"What type of job can I actually get with this?"*

In Pursuit bridges the gap between learning code and building a career. By mapping prior skills, experience, and real-time curriculum progress to industry job titles, the platform provides builders with a live, visual trajectory of their professional growth—replacing doubt with clarity, courage, and optimism.

Key Features

-  **Skill-to-Career Trajectory Mapping** Visualizes how cumulative technical skills gained week-by-week combine to unlock specific tech roles and job titles.
-  **Prior Experience Integration** Allows builders to input past professional backgrounds and non-traditional experience, overlaying it with their current curriculum to build a personalized career bridge.
-  **Real-Time Career & Technical Dashboard** Provides a live snapshot of current technical proficiency, upcoming milestones, and target job readiness.
-  **Skill Gap & Job Requirement Insights** Shows exact job possibilities at any point in the learning journey and highlights the precise competencies required to unlock the next level.
-  **Purpose-Driven Progress** Eliminates the "Where am I going?" anxiety by demonstrating the direct connection between daily practice and long-term career goals.

Tech Stack & Architecture

- **Frontend:** React / Modern Web Dashboard (UI/UX optimized for trajectory visualization)
- **Backend:** Node.js / Python REST API
- **Data & Matching Engine:** Skill-to-role taxonomy mapping logic
- **Version Control:** Git & GitHub

Getting Started

Prerequisites

- Node.js (v18.0 or higher)
- Python 3.10+
- Git

Installation

1. **Clone the repository:**
2. Bash

None

```
git clone https://github.com/Naquanm621/pursuit-roadmap.git
cd pursuit-roadmap
```

- 3.
4. **Install dependencies:**
5. Bash

None

```
npm install
```

- 6.
7. **Set up environment variables:** Create a `.env` file in the root directory:
8. Code snippet

None

```
PORT=5000
DATABASE_URL=your_database_connection_string
```

- 9.
10. **Run the development server:**
11. Bash

None

```
npm run dev
```

12.

Roadmap

- [x] Initial conceptualization & pitch deck structure
- [x] Core script & Loom presentation outline
- [] Interactive UI layout for trajectory matching
- [] Integration with curriculum milestones
- [] Dynamic job market data & skill gap analytics

Vision Statement

"We stop guessing and start building. Because when you can see the destination clearly, the grind doesn't just feel like work—it feels like progress."

pursuit-roadmap

Create technical documentation, pitch decks, README files, or presentation scripts for the 'In Pursuit' career trajectory roadmap platform developed for software engineering and AI-native builders at Pursuit. Use when the user requests documentation, README files, script refinements, or presentation materials related to the Pursuit Roadmap / In Pursuit project.
